

# **CLIMATE CHANGE GOT YOU DOWN? HERE'S THE PROBLEM**

The leading cause of climate change is the drastic increase in CO<sub>2</sub> emissions from the burning of fossil fuels.

Climate change is threatening our food and water supplies, economy, infrastructure, public health, homes and communities.

## **WHAT CAN YOU DO?**

Be a part of the solution. 350NJ is the local, all-volunteer chapter of 350.org, the global climate solutions organization with active members in 188 countries. We need you as a member to help grow our movement in New Jersey.

Through local grassroots organizing, online campaigns and mass public actions, we work to counteract the power of the fossil fuel industry in favor of a just transition to clean, safe renewable energy.

We are an inclusive group that meets regularly on conference calls, at local libraries, and occasionally, in our homes for a pot luck meal. Though our meetings are fun and social, we feel the urgency of climate change and act accordingly.

**INFO@350NJ.ORG**

The number 350 means climate safety: to preserve a livable planet, scientists tell us we must reduce the amount of CO<sub>2</sub> in the atmosphere from its current level of 400 parts per million to below 350 ppm.

# TAKE CLIMATE ACTION IN NEW JERSEY WITH 350NJ:

We educate the community and help drive the climate conversation in the media (through press coverage, letters to the editors, Op-Eds, etc.) on issues like oil trains, the proposed Pilgrim and Pinelands pipelines through New Jersey, fracking waste, air pollution and environmental racism.

We organize groups and charter buses to national and regional climate actions like the Peoples Climate March and NOKXL.

We make phone calls, write to local officials, and occasionally visit Trenton to advance legislation that combats global warming and supports wind and solar power and energy conservation in New Jersey.

## 2016 CAMPAIGNS:

**DIVEST/REINVEST** - A call to replace institutional investments in planet-warming projects with alternative investments in clean, renewable technologies.

**BREAK FREE ALBANY** - May 14 2016. A major, coalition-led action to shut down the world's most dangerous fossil fuel projects and support the most ambitious climate solutions.

**NJ COMMUNITY SOLAR** - A local, renewable energy solutions project that would make solar energy accessible and affordable in low-income communities.
